Hello.. My first post here.

It's about one year now I'm learning macrophotography.. all I know I learned from Internet and doing a lot of practice (almost daily)

Usually I use an APSC Nikon D7000 and 4 lenses.. a Nikkor AF-S 40mm, a Nikor AF 60mm, a Tokina 100mm and a Tamron 180mm, and extension rings...

In the field usually I do 3-5 handheld shots to stack... I can't get used to tripods, it's too awkward for me.

When I try table stacking I use a reversed Nikkon AF 28mm and rings... here are some (somewhat) recent shots...
